

Interdisciplinary Dialogue Funding

We invite participants of the Interdisciplinary Dialogue to join together in submitting 1-2 page seed grant proposals that delve more deeply into the following interdisciplinary theme:

**Preparing to flourish in a changing climate:
Exploring local community solutions to the economic, social
and environmental impacts of climate change in California**

Economic, social and environmental issues associated with climate change range from impacts on public health, infrastructure and employment, to working and natural lands. Yet the burden of gathering evidence, mitigating impacts and implementing solutions often falls unequally on those already disadvantaged in the community, such as marginalized, tribal and indigenous peoples. How do we ready ourselves to be resilient in facing climate change? How do we protect all those in the community, including those historically least supported, in order to adapt and flourish?

Collaboration Consortium Seed Funding Program

Up to \$5,000 will be available for one to two proposals that best demonstrate:

- **Relevance** to the interdisciplinary issue raised during the event
- Novelty of uncommon **collaboration** among partners
- **Unique** ability to contribute to the field
- Likelihood for near-term **impact**

Open until April 26, 2019: short applications (1-2 pages, including figures)

Submit proposal(s) by using the application link and password below.

Password: CollabMarch2019
